

ZYNX PRO-STEER

The ZYNX PRO-STEER gives unsurpassed steering assist performance. Together with ZYNX Guidance you have on-screen real-time guidance, mapping and the simple intuitive to use color touch screen, giving operators the simplest platform to work with.

ZYNX PRO STEER is compatible with both GPS and DGPS receivers and offers accuracy from entry-level GPS through DGPS free-to-air marine beacon and WAAS (where available) to subscription systems (including OmniSTAR VBS and HP) radio systems, offering a range of positioning accuracy to meet any application.

PRO STEER incorporates a three axis gyro and tilt sensor, which ensures optimum steering assist performance in all types of terrain. Advanced software technology eliminates the use of a steering angle sensor. The smooth steering assist through advanced proportional hydraulic valve system and software design, reduces wear and tear on machine and reduces operator fatigue.

PRO STEER is available to suit most brands and models of tractors or sprayers equipped with hydraulic steering, including tracked and open center hydraulic equipment.

PRO STEER Steering Assist is designed for ease of installation and calibration. The installation kit incorporates the hydraulic block, hoses, wiring harness and calibration software. Due to the advanced algorithms and processing power of ZYNX and PRO STEER difficult to install and maintain wheel angle sensors are not required again improving installation ease and reliability.

PRO STEER is also available for Steering Ready equipment and requires no changes to this equipment's existing hydraulics reducing installation time and costs.

ZYNX standard features include a full color touch-screen with user selectable brightness and color selections to suit a variety of light conditions and with over 20 verbal and visual warnings the user instantly knows which area needs attention. Easy mounting of the console offers many options in regards to installation.

Other applications available for ZYNX include Spray Rate Controller and Variable Seed Rate Control, Spreader Controller, Mapping with Variable Rate Control.

On a new machine or as an upgrade on your existing machine, PRO Steer is the best solution.
